

# Weld Backing Tape®

## Features and Benefits

© HFT®

**HFT®'s Glass Fibre Weld Backing Tape® has no true melting point, unlike Ceramic Fibre, which has a melting point of 1,800°C, causing concern when temperatures during TIG welding can reach up to 6,000°C.**

- Light, medium, heavy and extra heavy grades.
- For sheet, plate, pipe and vessels.
- Thick, heat resistant glass fibre centre band.
- Light duty for use up to 80 Amps.
- Medium duty for use up to 160 Amps.
- Heavy duty for use up to 240 Amps.
- Extra heavy duty for use up to 600 Amps.
- No contamination of the weld root.
- Suitable for all welding of all metals including duplex, carbon, alloy steels, nickel alloys and titanium.
- Eliminates back gouging and grinding.
- No need for back gas purge, saving money, time and labour.
- Massive savings on cleaning costs.
- Eliminates weld effects.
- Speeds up production.
- Full technical support.
